FOREWORD

Pennsylvania is one of the leading livestock States of the East, ranking tenth among the forty-eight States in number of cows and heifers two years old and over kept for milk, sixteenth in number of all cattle and calves on farms, and sixteenth in number of horses and colts.

The number of horses and colts on Pennsylvania farms decreased from 294,000, January 1, 1937, to 291,000, January 1, 1938. The small tractor with

its increased adaptability, efficiency and higher speed is probably responsible for the decreased number of horses on farms the past year. The high speed, single plow type of tractor made especially for small farms costs little more than a good team of young mules or horses.

Pennsylvania ranked eleventh among the forty-eight States in cash income from farm production.

Livestock and livestock products accounted for 68 percent of the cash income of the State's farmers in 1937 and field crops for 32 percent. The total cash farm income for that year was \$266,800,000 a \$27,000,000 increase over 1936.

FARM LIVESTOCK INVENTORY, JANUARY 1, 1938

Dairy cattle and sheep showed increases in value per head and work stock and swine registered decreases compared to last year, according to the annual January 1, inventory of livestock on Pennsylvania farms.

Total inventory value of the five species of livestock January 1, 1938, is \$148,262,000 which compares with \$143,755,000, the inventory value of these species a year previous and with the January 1, 1933 value of \$86,004,000, the low point in recent years.

The number of horses on farms in Pennsylvania has been declining rather steadily. However, shipments of young stock into the State and a revival of interest in horse-raising are replacing the aged work stock with young, vigorous animals. The Bureau of Animal Industry of the Pennsylvania Department of Agriculture reports 405 stallions registered in 1937, compared with 384 in 1936, 370 in 1935, 349 in 1934, 317 in 1933, 205 in 1929 and 408 in 1922. Horses continue to command good prices.

The number of cattle and calves on January 1 have increased from 1,469,000 in 1937 to 1,498,000 in 1938. This increase was in beef cattle and young animals. The number of cows and heifers 2 years old and over kept for milk showed no increase—it has remained constant at 887,000 for the past three years.

Prices of milk cows have increased steadily from 1933 to date. The estimated value of cows and heifers two years old and over kept for milk is \$69,186,000, an increase of \$5,322,000 over last year.

The number of cattle reacting to the T. B. test for the year approximated 4,000 and to the Bang's disease test 14,000.

The estimated number of hogs on Pennsylvania farms of 639,000 on January 1, 1938 compares with 652,000, the number January 1, 1937. Swine were valued at \$12.60 per head on January 1, 1938. Pennsylvania hog prices dropped 31 percent from late summer through December—from about \$13.00 per hundred for good and choice grades to a December average of about \$9.00.

The estimated number of sheep and lambs on Pennsylvania farms January 1, 1938 of 453,000 is 9,000 or about 2 percent less than last year. The estimated value per head of \$5.70 is higher than last year and offsets the decrease in numbers to bring the total inventory farm value of sheep above last year. The estimated January 1 sheep value of \$2,597,000 compares with \$2,480,000 last year.
